ADVANCED WASTE TREATMENT
COURSE OUTLINE

Chapter   Topic                                                                 Page
1         ODOR CONTROL .......................................................................................... 1
Tomi Besaki
Revised by Russ Armstrong

2         ACTIVATED SLUDGE (PURE OXYGEN PLANTS AND
OPERATIONAL CONTROL OPTIONS) ................................................................. 41
Ross Gudgel
Larry Peterson

3         RESIDUAL SOLIDS MANAGEMENT ............................................................. 153
Liberato D. Tortorici
Boris L. Partushenko
James F. Stahl
Special sections by Richard Best and William Anderson

4         SOLIDS REMOVAL FROM SECONDARY EFFLUENTS .................................. 325
Paul Amodeo
Ross Gudgel
James L. Johnson
Paul J. Kemp
Robert G. Blanck
Francis J. Brady

5         PHOSPHORUS REMOVAL ........................................................................ 465
John G. M. Gonzales

6         NITROGEN REMOVAL ............................................................................ 509
John G. M. Gonzales

7         ENHANCED BIOLOGICAL (NUTRIENT) CONTROL .................................... 545
John G. M. Gonzales
Ross Gudgel

8         WASTEWATER RECLAMATION AND REUSE ......................................... 573
Daniel J. Hinrichs

9         INSTRUMENTATION .................................................................................. 615
Leonard Ainsworth
Revised by William H. Hendrix

Appendix
COMPREHENSIVE REVIEW QUESTIONS AND SUGGESTED ANSWERS ............ 686
WASTE TREATMENT WORDS ........................................................................ 703
SUBJECT INDEX ............................................................................................. 755
SUBJECT INDEX

A
Abbreviations, instrumentation, 625
Abnormal operations
- alum flocculation, phosphorus removal, 503
- biological phosphorus removal, 486
- gravity filters, 404
- lime precipitation, phosphorus removal, 494
- pressure filters, 422, 423
- upflow filters, 436, 437
Absorption, odors, 21
Accuracy, instrumentation, 632
Activated carbon, odors, 31–34
Activated sludge, nitrogen removal, 518
Activated sludge process
- acclimation of microorganisms, 102
- aeration basin, 119–122
- Al West, 95
- ammonia treatment, 80, 138
- amoeboids, 93, 94, 95
- artichoke wastes, 126
- BOD, 101
- biological nitrification, 139
- brewery wastewaters, 115
- bulking, 71, 81, 82, 106, 115, 119, 174
- COD, 101
- characteristics, wastes, 100
- ciliates, 93, 94, 106
- clarification, 98, 107
- complete mix, 64, 71
- constant percentage RAS flow, 70
- constant RAS flow, 68
- control of WAS, 76
- conventional, 64, 68, 76, 78
- cryogenic air separation, 62, 63
- dairy wastes, 128–135
- denitrification, 143
- dissolved oxygen, 106, 119, 127, 128, 138, 139
- effects of industrial wastes, 98
- endogenous respiration, 87
- extended aeration, 68, 76, 78, 126, 136
- F/M, 76, 78, 113, 122, 127, 142
- filamentous organisms, 92, 106, 114, 119, 124, 125, 127, 174
- flagellates, 93, 94, 95
- flow, industrial wastes, 100, 102
- food processing wastes, 126
- Food/Microorganism, 76, 78, 112, 113, 122, 127, 142
- high rate, 76, 78
- industrial wastes, 97
- laboratory testing, 126, 138
- layout, 58, 61
- MCRT, 76, 79, 93, 113, 122, 126, 136, 142
- MLVSS, 76, 82
- maintenance, 64, 66, 144
- mean cell residence time, 76, 79, 93, 113, 122, 126, 136, 142
- methods of wasting, 75
- microorganisms, 80, 82, 92, 93, 94, 114
- microscopic examination, 92, 114
- modes, 64, 68
- monitoring, 97, 136
- neutralization, 101, 106, 109
- nitrification, 68, 80, 136, 139
- observations, 98, 106, 138
- operation, activated sludge process, 68, 75
- operation, industrial wastes, 106, 119, 127, 130, 138
- operation, RAS and WAS, 68, 75
- operational strategy, industrial wastes, 98, 106, 115
- organic wastes, 99
- oxygen generation, 60, 144
- oxygen uptake rate (OUR), 84, 89–92
- PSA (Pressure Swing Adsorption), 60, 62
- periodic feeding for start-up, 113
- petroleum refinery wastes, 136
- pH, 101, 106, 126, 136, 138
- phenols, 138
- pilot plant, 126
- pin flocc, 94, 95
- plant view, 58
- pressure swing adsorption (PSA), 60, 62
- pretreatment, 97, 100, 102, 103, 104, 116, 126
- protozoa, 92, 93, 114
- pulp and paper mill wastes, 107
- pure oxygen, 57
- recordkeeping, 107, 126
- respiration rate, 83–87
- restart, 105
- return activated sludge (RAS), 68, 107
- review of plans and specifications, 143
- rising sludge, 143
- rotifers, 92–94, 106
- SVI approach for RAS, 72
- safety, 64, 65, 112, 144
- screening, 102
- seed activated sludge, 105, 113
- separate sludge reaeration, 73
Activated sludge process (continued)
settleability approach for RAS, 70, 71, 72
shock loadings, 136
shutdown, 110
silica gel trap, 63
sludge age, 76, 122
sludge blanket depth, 70
Sphaerotilus natans, 124, 131
start-up, 64, 105, 110, 113
steady state, 75, 111
step-feed, 64, 68, 113
straggler floc, 93, 94
sulfide shock load, 138
surface aerators, 57, 61
suspended solids, 101
temperature effect, 80, 115, 122
toxic wastes, 99, 101, 106
troubleshooting, 71, 74, 76, 104, 112
turbulent mixers, 60
volatile solids inventory, 81
WAS, 75, 107, 123
waste activated sludge, 75, 107, 123
Adsorption, 31–34
Advanced waste treatment effluent quality, 584
Aerated lagoon, 132
Aerobic condition, phosphorus removal, 476
Aerobic digestion
air requirements, 211, 212, 215
batch operation, 207
bulking, 211
continuous operation, 207
description, 207
digestion time, 207, 209, 212, 216
dissolved oxygen, 207, 211, 215
efficiency, 209, 213, 216
factors affecting performance, 207
filamentous organisms, 211, 215
foam, 211, 213, 215
guidelines, operation, 209
hydraulic loading, 210
inhibitory pollutants, 209
laboratory analysis, 212
loadings, 210, 216
nitrification, 215
observations, 214
odors, 213
operation, 212
overflow, 207
oxygen uptake, 211, 212, 215
performance, 207, 210, 213
pH, 212, 215
sampling, 212
sludge type, 207, 211, 214
solids loading, 210
temperature, 210, 211, 215
time of digestion, 207, 209, 212, 215, 216
toxicity, 216
troubleshooting, 214, 216
underflow, 207
variables, 207
visual inspection, 214
volatile solids loading, 207, 210, 213, 215, 216
Agglomeration, 342, 491
Aerobic digestion
air requirements, 211, 212, 215
batch operation, 207
bulking, 211
continuous operation, 207
description, 207
digestion time, 207, 209, 212, 216
dissolved oxygen, 207, 211, 215
efficiency, 209, 213, 216
factors affecting performance, 207
filamentous organisms, 211, 215
foam, 211, 213, 215
guidelines, operation, 209
hydraulic loading, 210
inhibitory pollutants, 209
laboratory analysis, 212
loadings, 210, 216
nitrification, 215
observations, 214
odors, 213
operation, 212
overflow, 207
oxygen uptake, 211, 212, 215
performance, 207, 210, 213
pH, 212, 215
sampling, 212
sludge type, 207, 211, 214
solids loading, 210
temperature, 210, 211, 215
time of digestion, 207, 209, 212, 215, 216
toxicity, 216
Anoxic selector, 562
Arch, chemicals, 636
Artichoke wastes, 126
Ash, incinerator, 279, 300
Aspirator, 182
Attached growth reactors, nitrogen removal, 524–529
Autogenous burn, 286
Automatic control system, 635
Automatic controllers, 666
Automatic monitoring units, 97
Automation systems, computer, 631
Autotrophic, 477, 518

BBP (bloodborne pathogens) program, 645
BOD (biochemical oxygen demand), industrial wastes, 101
Backup controls, 631
Backwashing
  gravity filters, 393, 398–400, 403
  pressure filters, 419–421
Baffle, 172
Bardenpho process, 556–559
Basket centrifuge, 189, 190, 196, 198, 200, 201
Battery-backed power supplies, 603
Beds, sludge, 253, 256
Bellows, pressure measurement, 647, 648
Belt filter press
  belt speed, 243, 244
  belt type, tension, 241
  belt type, blind, 243, 244
  cake, 241, 244
  cleaning of belt, 243, 244, 245
  conditioning, 240, 241
  description, 240
  drawing, 242
  factors affecting performance, 241
  guidelines, operating, 241
  hydraulic loading, 243, 244
  operation, 243
  performance, 244
  plans and specifications, 304
  polymer dosage, 241, 244
  pressure, 241
  sludge type, 241, 244
  solids recovery, 244
  troubleshooting, 244
  variables, 243
  washing out, 243, 244
  Bench-scale analysis, 143
  Benzene, 20
Bernoulli Effect, 659
Bioassay, 108
Biochemical oxygen demand (BOD), industrial wastes, 101
Biological generation, odors, 9
Biological nitrification, 139
Biological nitrogen removal
  alkalinity and pH, 521, 558, 561, 562
  process description, 520–535
  review of plans and specifications, 565, 570
Biological nutrient removal, 518–519
Biological phosphorus removal
  abnormal operation, 486
  definitions, 476
  efficiency, 488
  emergency operation, 486
  equipment, 483
  layouts, process, 478, 479
  loading guidelines, 485
  luxury uptake, 478–489
  maintenance, 487
  microbial population, 477
  microorganisms, 477
  monitoring, 485
  operation, 484–487
  plans, 488, 565, 569–570
  process efficiency, 488
  process layouts, 478, 479
  review of plans and specifications, 488, 565, 569–570
  safety, 483
  selectors, 477
  shutdown, 484, 486
  sludge disposal, 487
  solids management, 486
  specifications, 488, 565, 569–570
  start-up, 484
  strategy, operation, 487
Biological towers, odors, 17
Biomass, 476
Biosolids, 123, 124, 130, 289, 296, 297, 300
Birds, solids management, 303
Blanket depth, gravity thickeners, 174, 175, 176, 178, 180
Blending tank, 582, 583
Blind, filter media, 250, 251
Blockout, 28
Bloodborne pathogens (BBP) program, 645
Boron, 608, 610
Bourdon tube, pressure measurement, 647
Bound water, 174
Bourdon tube, pressure measurement, 647, 648
Breakpoint chlorination, 519, 540, 541
Breakpoint chlorination, nitrogen removal, 139
Brewery wastewater
  activated sludge treatment, 115, 116
  ammonia addition, 119
  BOD, 115, 116
  bulking, 119
  characteristics of wastewater, 115
  chlorination, 119
  dechlorination, 119
  dissolved oxygen, 119
  equalization tank, 116
  F/M ratio, 122
  filamentous organisms, 119, 124
762 Advanced Treatment

Brewery wastewater (continued)
flow diagram, 117, 120
foam, 124
grit channel, 116
laboratory testing, 126
layout, 116, 117
MCRT, 122
mixed liquor suspended solids (MLSS), 122
nutrients, 118
oil and grease, 118
operational strategy, 115
pH, 116
pretreatment, 116
primary clarifier, 118
recordkeeping, 126
return activated sludge, 119, 122
sludge age, 122
sludge blanket, 122
sludge wasting, 123
sources of wastewater, 115
Sphaerotilus natans, 124
temperature, 122
toxic substances, 123
wasting sludge, 123
Bubbler tubes, level measurement, 648, 651, 652
Buffer capacity, 521
Bulking
activated sludge, 71, 82, 106, 115, 119, 174
aerobic digesters, 211
brewery wastes, 119, 124
centrifuge thickeners, 189
detention time, 195
dewatering, 251, 253
differential scroll speed, 196, 252
disc nozzle centrifuge, 189, 193, 194, 196, 200, 201
diffusion, 189
feed solids, 189, 196
feed time, 195
scroll centrifuge, 189, 191, 192, 196, 199, 201, 202
scroll speed, 195, 201, 202
scroll speed, 195
solidification, 196
solids loading, 196
solids recovery, 196, 198, 199, 201
thickened sludge, 196, 201
troubleshooting, 200, 201
variables, 189
visual inspection, 201
Characteristics of industrial wastes, 100
Chemical analysis, 660
Chemical conditioning of sludge
addition of chemicals, 227
alum, 220
automatic feeding systems, 228
centrifuges, 196, 197, 198, 199, 201, 227
dissolved air flotation (DAF) thickeners, 188, 227
dosages, chemicals, 221–225
equipment, 226
ferric chloride, 220, 222
glucose thickening, 227
jar tests, 221, 223
lime, 222, 226
mannich reaction polymer, 221

C

COD (chemical oxygen demand), industrial wastes, 101
CPR (cardiopulmonary resuscitation), 645
CPU (central processing unit), 672, 673
cadmium, 209, 296
calibration
equipment, 670
measurement process, 633
cardio pulmonary resuscitation (CPR), 645
Case histories, wastewater reclamation, 583
categories, instrumentation, 662–676
cation exchange capacity, 610
carboxylic acid, 246
Cavitation, 182
central processing unit (CPU), 672, 673
centrifuge, 189, 191, 201, 487, 496

Centrifuge thickeners and dewatering
Also see Dewatering sludge
age of sludge, 189
basked centrifuge, 189, 190, 196, 198, 200, 201
bowl speed, 189, 194, 201
caking sludge, 189
centrifugal forces, 189, 196, 201
depth of pool, 189, 195, 201
detention time, 195
dewatering, 251, 253
differential scroll speed, 196, 252
disc nozzle centrifuge, 189, 193, 194, 196, 200, 201
drowning, 189
feed solids, 189, 196
feed time, 195
guidelines, operation, 194, 196, 253
hydraulic loading, 194
nozzle size, 189, 196
number of nozzles, 189, 194, 196
observations, 201
operation, 196, 252, 253
performance, 196, 253
plains and specifications, 304
polymers, 196, 197, 198, 199, 201, 253
pool depth, 189, 195, 201
rising sludge, 189
scroll centrifuge, 189, 191, 192, 196, 199, 200, 201
scroll speed, 195, 201, 252
shut down, 196
solid loading, 194, 253
solids recovery, 196, 198, 199, 201
start up, 196
thickened sludge, 196, 201
troubleshooting, 200, 201
variables, 189
vibrations, 200, 201, 202
visual inspection, 201

Chart recorders, 662, 664
Chemical analysis, 660
Chemical conditioning of sludge
addition of chemicals, 227
alum, 220
automatic feeding systems, 228
centrifuges, 196, 197, 198, 199, 201, 227
dissolved air flotation (DAF) thickeners, 188, 227
dosages, chemicals, 221–225
equipment, 226
ferric chloride, 220, 222
glucose thickening, 227
jar tests, 221, 223
lime, 222, 226
mannich reaction polymer, 221
Chemical conditioning of sludge (continued)
mixing equipment, 226, 228
plans and specifications, 304
polymer dosage, 221, 223
polymers, 220–227
pressure filters, 227, 236, 239
seasonal chemical requirements, 220
solution preparation, 220
troubleshooting, 228
typical chemical requirements, 227
vacuum filtration, 227, 245, 250, 251

Chemical feed
filters, 414
rate, instrumentation, 659
Chemical mist, odors, 25
Chemical nitrogen removal, 519
Chemical oxygen demand (COD), industrial wastes, 101
Chemical solution preparation, 226
Chemical stabilization of sludges
chlorine stabilization, 217, 218
lime stabilization, 217
operation, chlorine stabilization, 217, 218
operation, lime stabilization, 217, 218
pH, chlorine stabilization, 217
pH, lime stabilization, 217
slurry, lime, 217
troubleshooting, lime stabilization, 217

Chemical treatment
agglomeration, 342
alum, 346, 365
aluminum sulfate, 346
bulking, 342
caucustic soda, 364
chemical feed, 361–376
chemical mixing, 361
chemical storage, 361
chemicals, 346, 347
clarifiers, 377, 379–386
coaulation, 341, 377
colloids, 344
coprecipitation, 344
day tank, 361, 362
destabilization, 344, 345
diaphragm pump, 368, 369
equipment, 361–376
feed equipment, 361–376
ferric chloride, 347
gflocculation, 341, 377, 388
grainivorous belt chemical feeder, 372
grass, 345, 347
tag test, 350–359
glime, 347, 363
log, 374, 375, 376
MSDS, 359
maintenance, 386
material safety, 347, 359, 389

Material Safety Data Sheet, 359
metal salts, 344, 345, 347
odors, 16
operation, 374, 377, 386–388
phosphate monitoring, 358
polishing process, 342, 345
polymer, 344, 345, 366
polymer map, 348, 349
polymeric flocculants, 347
precipitates, 344
pumps, chemical feed, 367, 368
rotary feeder, 371
safety, 347, 359, 389
sedimentation, 377
