INDEX

A

AADT (Annual Average Daily Traffic), 80
Acceptance testing, 422
Accidents, reducing during excavation, 154
Aerobic, 349, 353
Agency resources, 13
Air, hydrogen sulfide control, 350
Air binding, 348
Air compressor, 120
Air gap, 294, 301
Air jumpers, 40, 43
Air padding, 352
Air shores, 151
Air testing procedures, manhole-to-manhole, 416–419
Alarm, atmospheric, 125–129
Aluminum shoring, 147, 150
Anaerobic, 113, 282
Anaerobic decomposition, 114
Annual Average Daily Traffic (AADT), 80
Annular space, 55
Arrow boards, traffic, 107
Asbestos-cement pipe issues, 51, 52, 377
As-built plans, 214, 298
Atmospheric alarm unit, 125–129
Backflow preventers, 33, 34, 35
Bag, sewer cleaning, 297
Bail, bucket, 323
Barrel, pipe, 282
Barriers, traffic control, 108, 109
Bench-scale analysis, 351
Biochemical oxygen demand (BOD), 348, 349, 353
Bloodborne pathogens (BBP) program, 134
Blower, ventilation, 118, 130, 141
BOD (biochemical oxygen demand), 348, 349, 353
Body resistances, electrical, 156
Branch sewer, 28, 29
Bucket bail, 323
Bucket machine, 285, 317–324, 328
Bugs, biting hazard, 117
Building service lateral, 28

C

Calcium nitrate, hydrogen sulfide control, 352
Calibration, alarms, 129
Call Before You Dig program (811), 145
Capacity Assurance, Management, Operation, and Maintenance (CMOM), 11–12
Carbon monoxide, hazardous levels, 115
Cardiopulmonary resuscitation (CPR), 121, 134
Cast-iron pipe, 52
Catalytic sensing element, 128
Cave-ins, avoiding, 152
Cavitation, 348
CCTV (closed-circuit television) inspection, 196–230
Certification, first aid, 121
Certification, operator, 8
Channelizing devices, traffic, 107
Chemical control program
control sewer, defined, 331
disadvantages of grease traps and interceptors, 340
EPA approval number for chemicals, 331, 332
EPA registration of chemicals, 330, 340
evaluation, 332
factors to consider, 331
floodin as root control treatment, 336
foaming as root control treatment, 335
FOG (fats, oils, and grease), 339
fumigant, 333
grease interceptors and traps, 339–340
insect control, 340
laboratory testing of chemicals, 330
personal protective equipment, 331
public education, 340
rodent control, 340
root control, 332
safety, 331
safety data sheet (SDS), 331, 332
selecting and using chemicals, 330–332
testing program for chemical effectiveness, 331
vector control, 340
Chemical hazards, 134
Chemicals, sewer cleaning, 285, 330–341
Chlorine, hydrogen sulfide control, 349
Civil and criminal liability, 13
Civil service exams, 8
Cleaning equipment maintenance, sewers, 326–328
Cleanouts, 36, 37, 39

Index 617
Closed-circuit television (CCTV) inspection, 196–230
Clothing, protective, 133
CMMS (Computer Maintenance Management System), 196
CMOM (Capacity Assurance, Management, Operation, and Maintenance), 11–12
Cold weather work, 296
Collapse, street, 5
Collection systems components, 28
confined spaces, 7
construction, 9
costs, 12, 13
definition, 5
design, 45–58
drawing and layout, 5
failures, 5
funding, 6
inspection, 9, 11, 13
low-pressure systems, 30, 31, 32
negligence, 10
odors, 11
operation and maintenance (O&M), 11–12
operator jobs, pay, and training, 6–8
operator responsibilities, 13
problems affecting, 9–10
recordkeeping, 10
stoppages, 6
Combination truck, 289
Compaction, 387, 388
Competent person defined, 93
job site responsibilities, 148
review of work by, 144
Computer applications used in collections system O&M, 285
Computerized Maintenance Management Systems (CMMS), 196
Concrete pipe, 52
Confined space permit, 135–138
Construction, collection system, 9, 61
Construction and repair. See Underground repair and construction
Contractor responsibility, 118
Control devices and zones. See Traffic control
Controlled density fill (CDF) in paved areas, 392
Controlling hydrogen sulfide, 349–352
Control points (hubs and reference stakes), 380–382
Correcting manholes, 396
Corrosion control, sewers, 348–352
aeration, 348
anaerobic organisms, 349
BOD effect on corrosion and odor, 348
chemicals, 349–352
design of collection system, 348
eyear pipe failure, 348
hydrogen sulfide, 348
metallic components, 348
preventing corrosion, 348
routine sewer cleaning, 348
sewer-use ordinances, 348
temperature effect on corrosion and odor, 348
Costs, collection systems, 12, 13
CPR (cardiopulmonary resuscitation), 121, 134
Cross-connections, 6
Dewatering excavations, 384
Discharge drop lines in force mains, 397
Dismantling, 152
Diving, 116
Drums, traffic control, 109
Dulfic iron pipe, 53
Dyes, tracer, 25

Damage to pipes and joints caused by roots, 9, 11
Decibel, noise exposure, 128, 161
Decision sight distance, defined, 81
Defect codes, sewer, 218
Defensive driving, 77
Degradation, reducing wastewater, 352
Design flows, 22
Design of collection systems, 45–58
Design period, 22
Design review, 60, 61
Dewatering excavations, 384
Discharge drop lines in force mains, 397
Diseases associated with organisms in raw wastewater, 10, 117
Bloodborne pathogens, 134
protection against, 10
Dispensing groundwater, 384
Ditches and trenches, sewer, 9
Drop manholes, 40, 41, 408
Drowning hazard, 116
Drums, traffic control, 109
Ductile iron pipe, 53
Dyes, tracer, 25
Dye testing
accessing private property, 266
advance preparation, 266
assumed velocity of flow, 267
conducting multiple tests, 267
cross-connection identification, 266
discharging into a body of water, 266
entry and exit points, 266
equipment and staffing, 266
estimate flow velocity, 266
expected flow time of dye, 267
illegal or defective service connection detection, 267
inflow and infiltration sources, 266
manhole entry, 267
notification of the public, 266, 267
procedure, 266–267
purpose, 266
recording and reporting results, 267
safety, 266
traffic control, 267
water supply needed to perform, 267
windy conditions considerations, 267

E
Earth movement effect on sewers, 9
Electrical
hazards, 116
safety, 154–160
Electrochemical sensors, 128
Electro scanning
advantages, 231, 233, 247
anomalies typically identified, 247
calibrating equipment, 236, 242, 244
categorizing defect size and type, 233
common application, 234
compared to other methods, 234, 257
current reading, 236, 244, 248, 250
defined, 231
equipment and staffing, 250
equipment set up, 242–244
examples of equipment, 258–239
flow condition assessment, 241
high-velocity cleaner use, 236, 242, 244
infiltration and exfiltration sources, 234, 247, 250
inspections program basics, 231
operator role, 244
overall pipe rating index (OPRI), 235
paved job site setup, 250
pipe defects, 231, 234, 251
pipe size and flow assessment, 241
plastic pipe lining assessment, 250
post-CIPP assessment, 247–250
practical application, 247–250, 254–256
procedures, 240–244, 246, 251–254
PVC pipe system assessment, 247
reporting scanning data, 244, 246, 253
reviewing past inspection records, 247
safety, 236, 242, 244
sewer lateral assessment, 250–256
sewer main assessment, 247
software, Electro Scan, 244
surface electrode use, 236, 242, 250
traffic control, 240
trenchless CIPP liners, 250
using with CCTV, 240, 247
wet-weather pipe condition assessment, 234

Emergency cleaning, sewers, 283
Emergency escape breathing apparatus, 121
Emergency traffic control situations, 86
Enclosure, manhole, 130, 131
Engulfment hazards, 116
Equipment
closed-circuit television, 214
dye testing, 266
electro scanning, 236
smoke testing, 259
Examinations, certification, 8
Excavation
avoiding cave-ins, 152
finding hazardous wastes, 144
safety rules, 144
smoke testing, 259
smoke testing, 259
Exfiltration, 9
Explosive atmospheres, 158

F
Field surveys, 45
Firefighting, 163
Fire hydrant, 293–294, 301, 310
First-aid
certification, 121
kit, 134
Flagging, traffic control, 96, 99
Flag tree warning devices, traffic control, 107
Flexible pipe, 53–55
Flexible pipes and joints, need for, 9
Floats, velocity, 26
Flooding during excavation, 384
Flotation of sewer, 10
Flow measurement, 24
Flows, design, 22
Foot protection, 133
Foot protection, 132
Head (water), defined, 287
Head, water, 317
Head protection, 132
Hydraulic cleaning, 287–298
Hydraulic shoring, 147, 150
Hydrogen peroxide, hydrogen sulfide control, 350
Hydrogen sulfide control
air, 350
Hydrogen sulfide
control
air, 350
calcium nitrate, 352
chemicals, 349–352
chlorine, 349
danger, 114
dominant, 341
dominant cycles, 341
odor control, 341
problems in sewers, 341
Hydrogen sulfide exposure
air, 350
immediately dangerous to life or health (IDLH), defined, 113
Infection caused by waste, 117
Inflection caused by waste, 117
Inflow dish installation, 400
Inflow prevention at manhole covers, 400
Inflow/Infiltration (I/I), 9, 22, 23, 28, 188–190
Inlet pipe, defined, 287
Inlet water supply, 287
Inspecting collection systems
closed-circuit television (CCTV), 196–230
comparison pipe assessment technology, 257
considerations, 61
electro scanning, 231–257
flow and infiltration (I/I), 188–190
manholes, 191–195
reasons, 187
Inlet pipe, defined, 287
Inspection equipment, 29
Inspecting collection systems
closed-circuit television (CCTV), 196–230
comparison pipe assessment technology, 257
considerations, 61
electro scanning, 231–257
flow and infiltration (I/I), 188–190
manholes, 191–195
reasons, 187
Inspection and testing of sewer construction, repair, and rehabilitation. See Underground repair and construction
Inspecting sewer excavation, 29
Interconnector sewers, 40
Intrinsically safe, defined, 128
Invert, defined, 47
Inverted siphons, 40, 43
Iron salts, hydrogen sulfide control, 351

G
Gas service lines, working under, 413
GFCI (ground-fault circuit interrupter), 157, 158
Gloves, 133
Gradient, 40
Gradient, sewer line, 40
Gravity collection systems, 28–29
Gravity flow, 9
Gravity flow, 9
Gravel, 40
Groundwater
infiltration, 10
pollution, 9

H
Hand and foot protection, 133
Hand rods, 283, 285, 313
Harness, full-body, 121, 122
Hazard communication, 164–173
Hazardous waste found during excavation, 144
Hazards, manhole. See Manhole hazards
Head, water, 317
Head (water), defined, 287
Head protection, 132
Hazard, defined, 117
Hazard communication, 164–173
Hazardous waste found during excavation, 144
Hazardous waste found during excavation, 144
High-level flag tree warning devices, traffic control, 107
High-velocity cleaner (HVC), 226, 236, 241, 242, 244, 285, 287–296, 326
Holding tanks, 30
Hot work, 139, 140
HVC (high-velocity cleaner), 226, 236, 241, 242, 244, 285, 287–296, 326
Hydrant, fire, 293–294, 301, 310
Hydraulic cleaning, 287–298
bags, 297
high-velocity cleaning, 287–296, 326
kites, 297
poly pigs, 297
scoters, 299–301
Hydrogen sulfide corrosion, 148
cycle, 341
effect of pH, 341, 344
hazardous levels, 114
health effects and exposure time, 341
odor control, 341
problems in sewers, 341
Hydrogen sulfide control air, 350
corrosion, 348
cycle, 341
effect of pH, 341, 344
hazardous levels, 114
health effects and exposure time, 341
odor control, 341
problems in sewers, 341
Hydrogen sulfide control
air, 350
calcium nitrate, 352
chemicals, 349–352
chlorine, 349
danger, 114
dominant, 341
dominant cycles, 341
odor control, 341
problems in sewers, 341
Index 621

Index  625
Underground repair and construction (continued)

- heavy equipment operation, 377, 383
- high groundwater levels during trench excavation, 384
- high-velocity cleaner use, 420
- illegal taps, 373
- improperly connected or defective tap issues, 372
- inside drop line installation in manholes, 397
- inspecting repaired pipe using CCTV, 392
- inspection and testing, 411–425
- job planning checklist example, 376
- large-diameter pipe issues, 385
- leak location using air pressure testing, 419–421
- main line sewer repair excavation, 391
- mandrel testing sewers, 422–423
- manhole construction, 407
- manhole repairs, 393–400
- manholes, finding buried, 393
- materials and performance criteria, 379
- materials specifications and standards, 412
- measuring distances, 382
- moisture content of backfill material, 387
- new sewer construction, 372, 382–383
- on-the-job reference tools, 425
- outside drop line, 397
- outside drop line connection example, 399
- paved areas, job site surface restoration, 388
- permits, 377
- personal protective equipment (PPE), 382
- pipe assembly examples, 386
- pipe bedding, 384, 386, 392
- pipe bedding and trench backfill materials inspection, 412
- pipe cleaning before inspection and testing, 422
- pipe grade, 382, 384
- pipe inspection, 412, 413
- pipe laying, 385
- pipe protection, 386–387
- pipe rehabilitation, 406
- plan and profile sheet example, 379
- planning, 371, 374–378, 389, 412
- precast concrete manhole example, 408–409
- preconstruction meeting, 374
- preventing unauthorized manhole removal, 407
- preventive maintenance crew, 393, 395
- public relations management, 377
- raising manhole frames and covers to grade, 393–395
- reading plans, 379–380
- record drawings or plans, 411, 425
- rehabilitated sewer inspection, 425
- rehabilitating or replacing entire pipe section, 406
- reports, 411, 422
- root intrusion, 374
- runoff, minimizing, 377
- safety, 371, 377, 378, 382, 385, 387, 391, 395, 413
- service line connection repair, 400–406
- sewer construction, 372, 382–383, 425
- sewer extension or repair project equipment, 383
- sewer main line repair, 389–392
- sewer pipe handling, placement, assembly, 385–386
- sewer plans, 380
- sewers connected to a settled manhole, 395
- shoring, 387, 391
- site preparation, 382
- site visit, 375, 377
- soil condition issues, 385
- soil testing procedures, 412
- special pipe foundations, 385
- spray-on liners pipe rehabilitation, 406
- stoppage requiring repair, 389
- storm sewer projects, 379
- subsurface construction work, 372
- surface restoration and cleanup, 414
- surveying instruments, 382
- televised pipe inspection after repair or construction, 422
- terrain and conditions at work site, 377
- testing/inspecting materials, 382
- testing new manholes after installation, 422
- tolerance zone, 375
- tools, 377, 390, 400–403
- traffic control, 377, 403
- trench backfilling and compaction inspection, 413
- trench design elements, 384
- trench excavation, 383–384, 413
- trenchless repair, 372, 406
- trench pipe bedding, 384–385
- trench shoring removal, 387
- trench width requirements, 384
- underground utilities, 375
- underground work overview, 371–378
- unimproved easement work sites, 377
- water jetting compaction equipment, 387
- water pressure testing, 414
- water testing sewers, 421–422
- working in special settings, 377, 382
- work order, 393, 400
- work request, 374–375
- work site cleanup, 392
- work site terrain and condition, 377
- wye and cleanout example, 404

Underground utilities
- Call Before You Dig program (811), 145, 375, 412
- conflicts, 378, 411
- locating, 145–146, 383, 391, 400
- Underground voids, 373
